# Issue SPFx Project Template

3 de julho de 2018   13:39

Doing the "Create new project" with the SPFx Project template selected, first thing i notice different
is that after a while it shows this message, it didnt on previous versions

Nevertheless i can get the windows form to fill and I tried any option "onprem" or "spo"

As a result it gets stuck at this window for at least 30mins or more (i killed the visual studio process)

In the command window, it shows that the project gets created successfully and a i can see the folder and files created on disk

C:\Windows\System32\cmd.exe

```
    _-----_
  |          |    .------------------------.
  |--(o)--|   |                             |
  `---------´  |     Welcome to the          |
  ( _´U`_ )   |   SharePoint Client-side    |
  /___A___\   |    Solution Generator       |
   |  ~  |    '------------------------´
  __'.___.'__
`  '  |° ´ Y `

 folder with solution name MySPFxProject5 will be created for you.
 component for the onprem environment will be created for you.
 web part with the name Test will be added to your solution.
eb part description is going to be Test.
et's create a new SharePoint solution.
  create config\package-solution.json
  create package.json
  create config\config.json
  create config\serve.json
  create typings\@ms\odsp.d.ts
  create typings\tsd.d.ts
  create tsconfig.json
  create .vscode\extensions.json
  create .vscode\launch.json
  create .vscode\settings.json
  create config\copy-assets.json
  create config\deploy-azure-storage.json
  create config\tslint.json
  create config\write-manifests.json
  create gulpfile.js
  create README.md
  create .editorconfig
  create .gitignore
  create src\webparts\test\TestWebPart.module.scss
  create src\webparts\test\TestWebPart.ts
  create src\webparts\test\loc\en-us.js
  create src\webparts\test\loc\mystrings.d.ts
  create src\webparts\test\TestWebPart.manifest.json

kipping installation of dependencies. You should run "npm install"

   _=+#####!
  ###########|
  ###/     (##|(@)    .----------------------------------.
  ###  ######|    \   | Solution my-sp-fx-project-5 is created. |
  ###/   /###|    (@) |     Run gulp serve to play with it!     |
  ####### ##|   /    '----------------------------------´
  ###     /##|(@)
  ###########|
    **=+####!
```

But when opening the solution, it shows up like this...

cuments > Visual Studio 2017 > Projects > MySPFxProject5 > MySPFxProject5
